

## Activity: Communication Scenario

*Edgar is 75 years old with a history of angina, high blood pressure and type 2 diabetes, managed with diet and medication. He has dementia, walks by himself and is known to wander.*

*He has been lashing out physically, is agitated and very active. He has been dribbling small amounts of urine, which is not normal for him. He has been doubled over in a chair, rubbing his stomach. He looks clammy and pale.*

What signs of deterioration is Edgar showing?
