

Activity: Resident Scenario

Edward is 75 years old with a history of angina, high blood pressure and type 2 diabetes, managed with diet and medication. He has dementia, walks independently and is known to wander.

This morning Edward has coughed up green sputum. His chest is noisy when he breathes, and he is agitated. He cannot walk far before needing to stop and catch his breath.

What signs of deterioration are there?

What assessments should you do?

What will you communicate?

What reviews or follow-ups?
